SERVICE MANUAL

AEP Model
Chassis No. SCC-L02C-A

WIO

V-2 CHASSIS

SPECIFICATIONS

Picture tube	CPD-220AS: 0.25 mm aperture grille pitch, 17 inches measured diagonally (16.0" viewable), 90-degree deflection, AR coating	Headphones output	Stereo minijack, 4 mW + 4 mW at 16 Ω
Viewable image size	CPD-220AS: Approx. 327 \times 241 mm (w/h) (12 $\frac{7}{8}$ \times 9 $\frac{1}{2}$ inches) 16.0" viewing image	Microphones input	Minijack, plug-in-power
Max resolution	Horizontal: Max. 1280 dots Vertical: Max. 1024 lines	USB pass-through	Upstream \times 1, downstream \times 1
VESA standards	640 \times 480 at 85 Hz 800 \times 600 at 85 Hz 1024 \times 768 at 85 Hz 1280 \times 1024 at 60 Hz	Controls	Contrast/Audio level/Picture enhancement/Brightness/Bass Boost/(Audio level)/H.Size/V.Size/Pincusion/Color tempeature/Audio muting
Deflection frequency	Horizontal: 30 to 70 kHz Vertical: 50 to 120 Hz	AC input voltage/current	100 to 240 V, 50 – 60 Hz, 1.5 – 0.5 A
Speaker	Left, right: 3.5 W \times 2, Sub-woofer: 10 W 50 to 20 kHz	Dimensions	CPD-220AS: Approx. 481.5 \times 483 \times 427.5 mm (w/h/d) (19 \times 19 $\frac{1}{8}$ \times 16 $\frac{7}{8}$ inches)
Microphones	Uni-direction, electret condenser microphone	Mass	CPD-220AS: Approx. 22 kg (48 lb 1 oz)
Microphones output	Miniplug	Design and specifications are subject to change without notice.	
Audio input	Stereo miniplug, input impedance 47 k Ω , input level 0.7 Vrms typical		

TRINITRON® MULTIMEDIA COMPUTER DISPLAY
SONY®

DIAGNOSIS

Failure	Power LED	Mute LED
Scan/S cap Failure	Blink Amber (On 1.5 sec, Off 0.5 sec)	————
ABL Failure	Blink Amber (On 0.5 sec, Off 1.5 sec)	————
Audio Failure	Blink Amber (1 sec/cycle)	Blink Amber (1 sec/cycle)

Aging Mode : Raster aging

During Power Save, press "POWER switch" button for longer than 4 seconds.

Self Test : OSD color-bar indication

During Power Save, press "POWER switch" button for longer than 8 seconds.

Power Saving Function

This display meets the power saving guidelines set by the International ENERGY STAR Program. It is capable of reduced power consumption when used with a computer equipped with Display Power Management Signaling (DPMS). By sensing the absence of the sync signal coming from the computer, it will reduce the power consumption as follows:

✓ CAUTION

The Power Saving function will automatically put the display into Active-off state if the power switch is turned on without any video signal input. Once the horizontal and vertical syncs are sensed, the display will automatically return to its Normal operation state.

State	Power consumption	Required resumption time	⏻ Power indicator	Speaker
1 Normal operation	CPD-120AS 130 W (max)	—	Green	On
	CPD-220AS 150 W (max)	—	Green	On
2 Suspend (1st step of power saving)	15 W (max)	Approx. 3 sec.	Green ↔ Orange	Off
3 Active-off (2nd step of power saving)	10 W (max)	Approx. 10 sec.	Orange	Off
4 Power-off	Approx. 10 W ¹⁾	—	Off	Off

✓ Note

1) To lower the power consumption to 0 W, disconnect the power cord.

WARNING!!

NEVER TURN ON THE POWER IN A CONDITION IN WHICH THE DEGAUSS COIL HAS BEEN REMOVED.

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY SHADING AND MARK ⚠ ON THE SCHEMATIC DIAGRAMS, EXPLODED VIEWS AND IN THE PARTS LIST ARE CRITICAL FOR SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY. CIRCUIT ADJUSTMENTS THAT ARE CRITICAL FOR SAFE OPERATION ARE IDENTIFIED IN THIS MANUAL. FOLLOW THESE PROCEDURES WHENEVER CRITICAL COMPONENTS ARE REPLACED OR IMPROPER OPERATION IS SUSPECTED.

SECTION 1

GENERAL

The operating instructions mentioned here are partial abstracts from the Operating Instruction Manual. The page numbers of the Operating Instruction Manual remain as in the manual.

Warning on Power Connection

- Use the supplied power cord.
For the customers in UK.
If you use the display in UK, please use the supplied UK cable with UK plug.

- Before disconnecting the power cord, wait at least 30 seconds after turning off the power switch to discharge static electricity from the CRT display surface.
- After the power has been turned on, the CRT is demagnetized for approximately 5 seconds. This generates a strong magnetic field around the bezel which may affect the data stored on magnetic tape or disks near the bezel. Place such magnetic recording equipment and tapes/disks at a distance from this unit.

The socket-outlet shall be installed near the equipment and shall be easily accessible.

Functions of Controls 9GB

Getting Started

Before using this display, please make sure that the following items are included in your package:

- Multimedia computer display (1)
- Warranty card (1)
- Operating instruction manual (1)
- Windows 95 Monitor Information Disk and its instruction manual (1)

This display will sync with any IBM or compatible system equipped with VGA¹⁾ or greater graphics capability. Although this display will sync to other platforms running at horizontal frequencies between 30 and 70 kHz, including Macintosh²⁾ and Power Macintosh systems, a cable adapter is required. Please consult Sony Technical Support for advice on which adapter is suitable for your needs.

- 1) VGA is a trademark of IBM Corporation.
- 2) Macintosh is a trademark of Apple Computer Inc.

Installation

Step 1: Connect the computer

With the computer switched off, connect the video signal cable to the display (VGA) connector on your computer. If your computer supports the DDC plug-and-play standard, this connection will enable the DDC communication between the display and the computer.

Also the video signal cable is combined with audio and microphone cables. If your computer is equipped with sound capability, connect the audio and microphone plugs to appropriate jacks located on your computer.

If you use a USB (universal serial bus) device, connect the USB device to the USB downstream jack and the PC to the USB upstream jack.

CPD-120AS

CPD-220AS

Note on handling the video signal cable
Do not touch the pins of the video signal cable.

Note on USB ports
USB ports are included to provide state-of-the-art technology. Until USB support is available at the operating system level, you must supply drivers to use USB devices. You can upgrade your operating system to a version that supports USB at the operating system level once a version becomes available. See the manual that came with your USB device for more information on setting it up and using it.

Continued to the next page →

Getting Started 11GB

10GB Getting Started

Step 2: Connect the power cord

With the display switched off, connect the power cord to the display and the other end to a power outlet.

CPD-120AS

CPD-220AS

Step 3: Turn on the display and computer.

Step 4: If necessary...

Adjust the user controls according to your personal preference.

The installation of your display is complete. Enjoy your display.

Using Your Display

Preset and user modes

The Multiscan CPD-120AS/220AS display has factory preset modes for the 10 most popular industry standards for true "plug and play" capability. For less common modes, its Digital Multiscan Technology will perform all of the complex adjustments necessary to ensure a high quality picture for any timing between 30 and 70 kHz.

NO.	Resolution (dots × lines)	Horizontal Frequency	Vertical Frequency
1	640 × 400	31.5 kHz	70 Hz
2	640 × 480	31.5 kHz	60 Hz
3	640 × 480	43.3 kHz	85 Hz
4	800 × 600	37.9 kHz	60 Hz
5	800 × 600	46.9 kHz	75 Hz
6	1024 × 768	60.0 kHz	75 Hz
7	1024 × 768	68.7 kHz	85 Hz
8	1152 × 864	44.8 kHz	47 Hz (95 Hz interface)
9	1152 × 864	54.8 kHz	60 Hz
10	1280 × 1024	64.0 kHz	60 Hz

Note for Windows® 95 users
Install the new model information of the Sony computer display from "Windows 95 Monitor Information disk" into your PC. (To install the file, refer to the attached "About the Windows 95 Monitor Information Disk".)

This display complies with "VESA DDC," the standards of Plug & Play. If your PC/graphic board complies with DDC, select "Plug & Play Display (VESA DDC)" or this display's model name (CPD-120AS/220AS) as "Display type" from "Control Panel" on Windows 95. Some PC/graphic boards do not comply with DDC. Even if they comply with DDC, that may have some problems on connecting this display. In this case, select this display's model name (CPD-120AS/220AS) as "Display type" on Windows 95.

Windows® is a registered trademark of Microsoft Corporation in the United States and other countries.

Note on recommended horizontal timing conditions
Horizontal sync width should be more than 1.0 µsec.
Horizontal blanking width should be more than 3.6 µsec.

Continued to the next page →

12GB Getting Started

Using Your Display 13GB

■ To enter new timings

When using a video mode that is not one of the 10 factory preset modes, some fine tuning may be required to optimize the display to your preferences. Simply adjust the display according to the adjustment instructions. The adjustments will be stored automatically and recalled whenever that mode is used.

A total of 10 user-defined modes can be stored in memory. If an 11th mode is entered, it will replace the first.

Using the tilt-swivel

With the tilt-swivel, this unit can be adjusted to be viewed at your desired angle within 90° horizontally and 7° vertically.

To turn the unit vertically and horizontally, hold it at its bottom with both hands. Pay attention not to get your hands caught between the display and the tilt-swivel.

Damper wire

Using a white background, very thin horizontal lines on the screen are visible as shown below. These lines are the damper wires.

The Trinitron tube has a vertically striped Aperture Grille inside. The Aperture Grille allows more light to pass through to the screen giving the Trinitron CRT more color and brightness.

The damper wires are attached to the Aperture Grille to prevent vibration of the Aperture Grille wire so that the screen image is constantly stable.

Adjustments

When one of the preset-type signals is input, no picture adjustment is necessary. You can, however, adjust the picture to your preference by following the procedure described below.

To adjust the display, turn on the display and computer. Select the adjustment item. You can adjust all items via the OSD (On Screen Display). Adjustments are automatically stored in the display's memory.

Control Panel

Adjusting volume

1. Press the \triangle + or - button. The VOLUME/CONTRAST OSD appears. The horizontal and vertical frequencies for each input signal received appear.

2. Press the \triangle +/- buttons to adjust volume. + to increase volume - to decrease volume

The VOLUME/CONTRAST OSD disappears 3 seconds after you release the buttons.

■ Tips

- The default setting of the volume level is 30 %.
- Adjust the volume while listening to the sound.
- Excessively high volume may cause howling.

■ To mute the sound

Press the \otimes button. The \otimes indicator lights. The light indicates mute function is in active mode.

Press again to cancel muting.

You can cancel muting also by pressing the \triangle + button.

■ Tip

- \otimes appears instead of \triangle on the VOLUME/CONTRAST OSD while the sound is muted.

Adjusting the picture contrast

The adjustment data becomes the common setting for all input signals.

1. Press the \otimes + or - button. The VOLUME/CONTRAST OSD appears. The horizontal and vertical frequencies for each input signal received appear.

Continued to the next page →

- Press the **0 +/-** buttons to adjust the picture contrast.
+ for more contrast
- for less contrast

The VOLUME/CONTRAST OSD disappears 3 seconds after you release the buttons.

Adjusting the picture brightness

The adjustment data becomes the common setting for all input signals.

- Press the **@** button.
The BRIGHTNESS/GPE OSD appears.

- Press the **Δ +/-** buttons to adjust the picture brightness.
+ for more brightness
- for less brightness

To exit the OSD

Press the **@** button again.

Tip
If you don't touch any buttons, the OSD automatically disappears after 10 seconds.
When you want to adjust another item, press the button of the item. The OSD of the selected item appears.

Adjusting the picture centering

The adjustment data becomes the individual setting for each input signal received.

- Press the **□** button.
The CENTER OSD appears.

- For vertical adjustment**

Press the **Δ +/-** buttons.
+ to move up
- to move down

- For horizontal adjustment**

Press the **0 +/-** buttons.
+ to move right
- to move left

To exit the OSD

Press the **□** button again.

Tip
If you don't touch any buttons, the OSD automatically disappears after 10 seconds.
When you want to adjust another item, press the button of the item. The OSD of the selected item appears.

Adjusting the picture size

The adjustment data becomes the individual setting for each input signal received.

- Press the **⊞** button.
The SIZE OSD appears.

- For vertical adjustment**

Press the **Δ +/-** buttons.
+ to increase
- to decrease

- For horizontal adjustment**

Press the **0 +/-** buttons.
+ to increase
- to decrease

To exit the OSD

Press the **⊞** button again.

Tip
If you don't touch any buttons, the OSD automatically disappears after 10 seconds.
When you want to adjust another item, press the button of the item. The OSD of the selected item appears.

Adjusting the picture rotation

The adjustment data becomes the common setting for all input signals.

- Press the **□** button.
The GEOMETRY OSD appears.

- Press the **Δ +/-** buttons.

+ to rotate clockwise
- to rotate counterclockwise

To exit the OSD

Press the **□** button again.

Tip
If you don't touch any buttons, the OSD automatically disappears after 10 seconds.
When you want to adjust another item, press the button of the item. The OSD of the selected item appears.

Adjusting the pincushion

The adjustment data becomes the individual setting for each input signal received.

1. Press the  button.
The GEOMETRY OSD appears.

2. Press the   buttons.
+ to expand the picture sides

– to diminish the picture sides

To exit the OSD

Press the  button again.

Tip

If you don't touch any buttons, the OSD automatically disappears after 10 seconds.
When you want to adjust another item, press the button of the item. The OSD of the selected item appears.

Setting the color temperature

The selected color temperature becomes the common setting for all input signals.

1. Press the  button.
The COLOR TEMPERATURE OSD appears.

2. Adjust with the   and   buttons.

To select 5000K or 9300K

Press   buttons.

The selected color temperature is indicated.

+ to select 9300K

– to select 5000K

To obtain the desired color temperature between 5000K and 9300K

Press   buttons.

+ for higher temperature

– for lower temperature

Tip

The first press of  or  button recalls the color temperature which was obtained at the last adjustment.

To exit the OSD

Press the  button again.

Tip

If you don't touch any buttons, the OSD automatically disappears after 10 seconds.
When you want to adjust another item, press the button of the item. The OSD of the selected item appears.

Resetting

To recall the factory settings for individual adjustment item

Press the button of the adjustment item you want to recall the factory settings, and then press the  button immediately before the OSD disappears.

To recall the factory settings for the current mode

Press the  button immediately when no OSD is shown.

To recall the factory settings for all modes

Press and hold the  button for 2 seconds.
All adjustments return to the factory settings.

Available Features

Selecting Graphic Picture Enhancement (GPE)

There are 4 GPE modes from "0" through "3," and the picture is more vivid at a higher number. You can enjoy movies and games with striking visuals by enhancing the picture sharpness.

Default setting is "0."

1. Press the  button.
The BRIGHTNESS/GPE OSD appears.

2. Press the   buttons to select the GPE mode.

+ for higher number

– for lower number

You can adjust the brightness on the same OSD by pressing the

  buttons.

To exit the OSD

Press the  button again.

Tip

If you don't touch any buttons, the OSD automatically disappears after 10 seconds.
When you want to adjust another item, press the button of the item. The OSD of the selected item appears.

Notes on GPE mode

For text oriented applications such as word processing and spreadsheets, set the GPE mode to "0" (default setting).

GPE (Graphic Picture Enhancement) mode is reset to "0" when:

- you turn off the display
- the PC recovered from the power saving mode
- the resolution is changed

Selecting Bass Boost

There are 3 Bass Boost modes from "0" through "2," and bass is boosted more at a higher number. The factory setting is "1" (normal mode). You can enjoy games and music programs with lively sound by selecting "2." When you use the PC phone, select "0." You will be able to hear the caller's voice more easily as the high-pitched tone is reduced.

1. Press the **B** button.
The VOLUME/BASS BOOST OSD appears.

2. Press the **0 +/-** buttons to select the BASS BOOST mode.
+ for higher number
- for lower number

After selecting the Bass Boost mode, you can adjust the volume on the same OSD.
Press the **0 +/-** buttons.
+ to increase volume
- to decrease volume

To exit the OSD
Press the **B** button again.

Tip
If you don't touch any buttons, the OSD automatically disappears after 10 seconds.
When you want to adjust another item, press the button of the item. The OSD of the selected item appears.

26GB Available Features

Troubleshooting

This section may help you isolate a problem and as a result, eliminate the need to contact technical support, allowing continued productivity.

No picture

- If the **⏻** indicator is not lit
 - Check that the power cord is properly connected.
 - Check that the **⏻** switch is in the "ON" position.

- If the **⏻** indicator is lit in orange, or alternately in orange and green
 - Check that your computer power switch is in the "ON" position.
 - The display may recover when you press any key on the keyboard of the computer.
 - Check that the video cable is properly connected.
 - Ensure that no pins are bent or pushed in the HD15 connector of the cable.
 - Check that the video card in your computer is seated completely in a proper bus slot.
 - Check that the video sync signal is within that specified for the display.
 - This display has a self-diagnostics function. To activate the function, turn off the computer and the display. Press and hold the **⏻** switch of the display for about 8 seconds. If the display is operating correctly, the screen will become white first and then the color bars will appear.

- If the **⏻** indicator is flashing in orange
 - Check that the video sync signal is specified for the display.
 - There is a potential display failure. Contact Sony Technical Support.

No sound from speaker

- If the **🔊** indicator is lit
 - Press the **🔊** button to cancel muting.
 - Check that the audio plug is properly connected.
 - Adjust the volume with **0 +/-** buttons.
 - Check that the headphones are not connected.
 - Check that the sound board of the computer is properly connected.
 - Check that the volume control, muting, sound selector, etc. of the sound board. (See the computer's manual.)

Microphone mixing is not possible

- Check that the MIC plug is properly connected.
- Check that the sound board of the computer is properly connected.
- Check that the microphone control, sound selector, etc. of the sound board. (See the computer's manual.)

30GB Troubleshooting

Howling (feed-back) is heard

- Decrease the volume with **0 +/-** buttons, or turn down the microphone input volume of the sound board.

Picture is scrambled

- Check your graphics board manual for the proper display setting on the display.
- Check this manual and confirm that the graphic mode and the frequency at which you are trying to operate is supported. Even within the proper range, some video boards may have a sync pulse that is too narrow for the display to sync correctly.

Color is not uniform

- Trip the **⏻** switch once to activate the Auto-degauss cycle*.

Picture is flickering

- If the refresh rate is not appropriate, the picture may flicker. Set the refresh rate of the non-interlace mode as high as possible on the computer. For details on how to set the refresh rate, consult the dealer of your computer or video board.

Screen image is not centered or sized properly

- Adjust picture centering, size, or geometry (rotation/ pincushion) on the OSD (pages 19-22).
- Some video modes do not fill the screen to the edge of the display. There is no single answer to solve the problem. There is a tendency for this problem to occur on higher refresh timings.

Picture is fuzzy

- Adjust the contrast and brightness on the OSD (pages 17, 18). Some brands of SVGA boards have an excessive video output level which creates a fuzzy picture at maximum contrast.
- The GPE setting may not be proper for the picture. Selecting a lower GPE number may improve the picture (page 25).
- Trip the **⏻** switch once to activate the Auto-degauss cycle*.

Picture bounces or has wavy oscillations

- Isolate and eliminate any potential sources of electric or magnetic fields. Common causes for this symptom are electric fans, fluorescent lighting, laser printers, etc.
- If you have another display close to this display, increase the distance between them to reduce interference.
- Try plugging the display into a different AC outlet, preferably on a different circuit.

Picture appears to be ghosting

- Eliminate the use of video extension cables and/or video switch boxes if this symptom occurs. Excessive cable length or weak connections can produce this symptom.

Continued to the next page →

Troubleshooting 31GB

Fine horizontal lines (wires) are visible

- These wires stabilize the vertically striped Aperture Grille. The Aperture Grille allows more light to pass through to the screen giving the Trinitron CRT more color and brightness.

Wavy or elliptical (moire) pattern is visible

- Due to the relationship between resolution, display Aperture Grille pitch and the pitch of some image patterns, certain screen backgrounds, especially gray, sometimes show moire which looks like wavy lines. This can only be eliminated by changing your desktop pattern.

Hum is heard right after the power is turned on

- When the power is turned on, the Auto-degauss cycle* is activated. While the Auto-degauss cycle is activated, a hum may be heard for about 3 seconds. This is not a malfunction.

* The Auto-degauss function demagnetizes the metal frame of the CRT to obtain a neutral field for uniform color reproduction. If a second degauss cycle is needed, allow a minimum interval of 20 minutes for the best result.

- If the problem persists, call your authorized Sony dealer from a location near you, or call Sony Technical Support.
- Note the model name and the serial number of your display. Also note the make and name of your computer and video board.

32GB Troubleshooting

SECTION 2 DISASSEMBLY

2-1. CABINET REMOVAL

2-2. U BOARD REMOVAL

2-3. J BOARD REMOVAL

2-4. EMI SHIELD REMOVAL

2-5. D BOARD REMOVAL

• REMOVAL OF ANODE-CAP

NOTE: Short circuit the anode of the picture tube and the anode cap to the metal chassis, CRT shield or carbon painted on the CRT, after removing the anode.

• REMOVING PROCEDURES

- ① Turn up one side of the rubber cap in the direction indicated by the arrow ①.
- ② Using a thumb pull up the rubber cap firmly in the direction indicated by the arrow ②.
- ③ When one side of the rubber cap is separated from the anode button, the anode-cap can be removed by turning up the rubber cap and pulling up it in the direction of the arrow ③.

• HOW TO HANDLE AN ANODE-CAP

- ① Don't hurt the surface of anode-caps with sharp shaped material!
- ② Don't press the rubber hardly not to hurt inside of anode-caps! A material fitting called as shatter-hook terminal is built in the rubber.
- ③ Don't turn the foot of rubber over hardly! The shatter-hook terminal will stick out or hurt the rubber.

2-6. STAND BLOCK REMOVAL

2-7. PICTURE TUBE REMOVAL

SECTION 3

SAFETY RELATED ADJUSTMENT

When replacing or repairing the shown below table, the following operational checks must be performed as a safety precaution against X-rays emissions from the unit.

	Part Replaced (▣)
HV ADJ	RV501

	Part Replaced (▣)
HV Regulator Circuit	D board IC801, C509, C542, C548, C802, C814, C815, R538, R539, R540, R541, R807, R822, R823, R824, RV501, T501 (FBT)
HV Protector Circuit	D board IC801, IC904, D511, D515, C515, C516, C517, C910, R532, R533, R534, R535, R996, T501 (FBT) • Mounted D board
Beam Current Protector Circuit	D board IC901, D596, C519, C528, C549, C904, R542, R543, R544, R545, R939 • Mounted D board

* Confirm one minute later turning on the power.

• HV Protector Circuit Check

Confirm that the HV protector circuit works and CRT screen disappearing when apply the voltage as shown below between Cathode of D511 on D board and GND using an external DC Power Supply.

- Standard voltage : $35.00^{+0.00}_{-0.10}$ V DC

Check Condition

- Input voltage : 240.0 ± 2.0 V AC
- Input signal : Cross hatch at 64.0 kHz
(VESA 1024 x 768)
- Beam control : CONT : 100 %, BRT : 40 %

• Beam Current Protector Check

Using an external DC Power Supply, applying voltage of 7.00 ± 0.05 V between ⑪ pin of FBT (T501) and GND, and confirm that the voltage of both ends C519 is within the Voltage range shown below.

- Standard voltage : Less than 3.26 V DC

Check Condition

- Input voltage : 240.0 V AC
- Input signal : Cross hatch at 64.0 kHz
(VESA 1024 x 768)
- Beam control : CONT : 100 %, BRT : 40 %

• B+ Voltage Check

Standard voltage : 150.0 ± 2.0 V DC

Check Condition

- Input voltage : 240.0 ± 2.0 V AC
Note : Use NF power supply or make sure that distortion factor is 3% or less.
- Input signal : Cross hatch at 64.0 kHz
- Beam control : CONT : 100 %, BRT : 40 %

SECTION 4

ADJUSTMENTS

• Landing Rough Adjustment

1. Enter the full white signal. (or the full black dots signal)
2. Set the contrast to "CONT"=MAX.
3. Make the screen monogreen.

Note: Off the outputs from R ch and B ch of SG.

4. Reverse the DY, and adjust coarsely the purity magnet (2-pole Mg) so that a green raster positions in the center of screen.

The 2-pole Mg adjustment must be done on the DY side (do not use 2-pole Mg on the neck assy side).

Note: Stack 2-pole Mg on neck assy side with their sides flushed.

Adjust color Knob
to non-color Knob.

5. Moving the DY forward, adjust so that an entire screen becomes monogreen.
 6. Adjust the tilt of DY, and fix lightly with a clamp.
- Note: "TILT" shall be set at 0.

• Landing Fine Adjustment

1. Put the set inside the Helmholtz coil.
2. Input the single green signal.
(Adjust to L/D control brightness)

[L/D control brightness]

Adjust L/D after aging for 2 hours with L/D control brightness

- (1) L/D control brightness 1/2 between cool L/D and hot L/D (Reference : $\sum I_k = 200 \text{ uA}$)
- (2) Practical max brightness 110 cd/m^2 $\sum I_k = 595 \text{ uA}$

[L/D control specification]

In Y axis : $\pm 7.5 \text{ um}$

At corners : $\pm 5.0 \text{ um}$

3. Demagnetize the CRT surface with the hand degausser, and perform auto degaussing.

Note: Adjust in a non-magnetic field.

4. Attach the wobbling coil to the designated part of the CRT neck.
5. Pull out the TLH correction piece up to the position where a stopper is engaged.
6. Attach the sensor of the landing adjustment unit on the CRT surface.
7. Adjust the DY position and purity, and the DY tilt.
For the purity adjustment, use 2-pole Mg on DY side.
8. Fasten DY with screw.

Note: Torque $22 \pm 2 \text{ kg-cm}$ ($2.2 \pm 0.2 \text{ Nm}$)

Perform auto degaussing.

Fixing DY with wedges.

"a" and "b" must be equal, and
"c" and "d" must be almost equal.

9. Adjust vertical swing with vertical pins, and also adjust horizontal swing so that horizontal keystone and vertical tilt are optimum, then fix with four wedges.

(When fixing DY with wedges, insert wedges completely so that the DY does not shake.)

Note:

- (1) Do not paste more than 2 magnets to one corner.
- (2) Paste within 80 to 100 mm from the DY on the diagonal line of the magnet.

<How to drive in wedges>

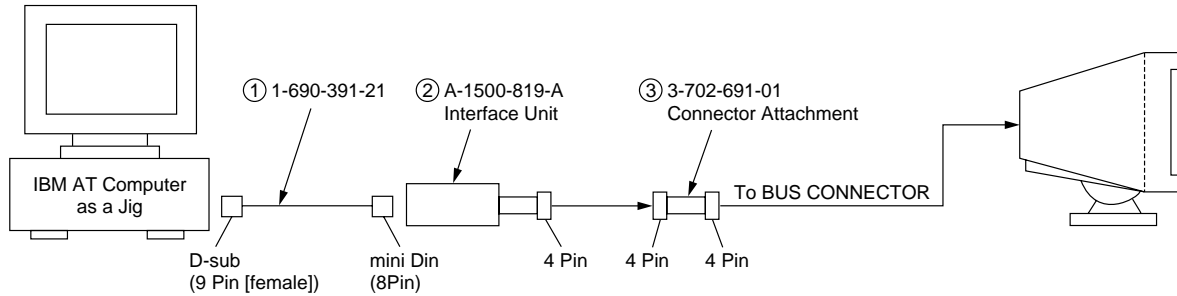

Apply a locking agent to the upper wedges only.

In such a case, apply agent so that it enters both sides of wedge and also inside the DY.

10. Check the landing of each corner, and if they do not satisfy the specification, paste a Disk-Mg onto the funnel and adjust.
11. If using the magnet, be sure to demagnetize with the hand degausser and check.
12. Remove the sensor and wobbling coil.
13. Check that the DY is not tilting, and fix the purity Mg with a white pen.

Connect the communication cable of the computer to the connector located on the D board on the monitor. Run the service software and then follow the instruction.

*The parts above (①)~(③) are necessary for DAS adjustment.

• Convergence Rough Adjustment

1. Enter the white crosshatch signal (white lines on black).
2. Adjust roughly the horizontal and vertical convergence at four-pole magnet.
3. Adjust roughly HMC and VMC at six-pole magnet.
Standard: $\pm 0.1\text{mm}$ (In the center of screen)

Fig. 1

Fig. 2

• Convergence Specification

MODE	All mode
A	0.24 mm
B	0.32 mm

• White Balance Adjustment Specification

- (1) 9300K
 $x = 0.283 \pm 0.008$
 $y = 0.298 \pm 0.008$
- (2) 5000K
 $x = 0.345 \pm 0.008$
 $y = 0.358 \pm 0.008$

• Vertical and Horizontal Position and Size Specification

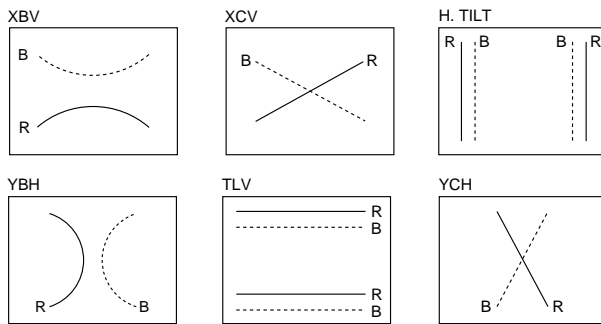

MODE	All mode
A	312 mm
B	234 mm

$$a \leq 1.6 \text{ mm}$$

$$b \leq 1.6 \text{ mm}$$

• Focus adjustment

Adjust the focus volume 1 and 2 for the optimum focus.
Standard: HMC, VMC $\pm 0.1 \text{ mm}$ (In the center of screen)

<6 Pole Magnet>

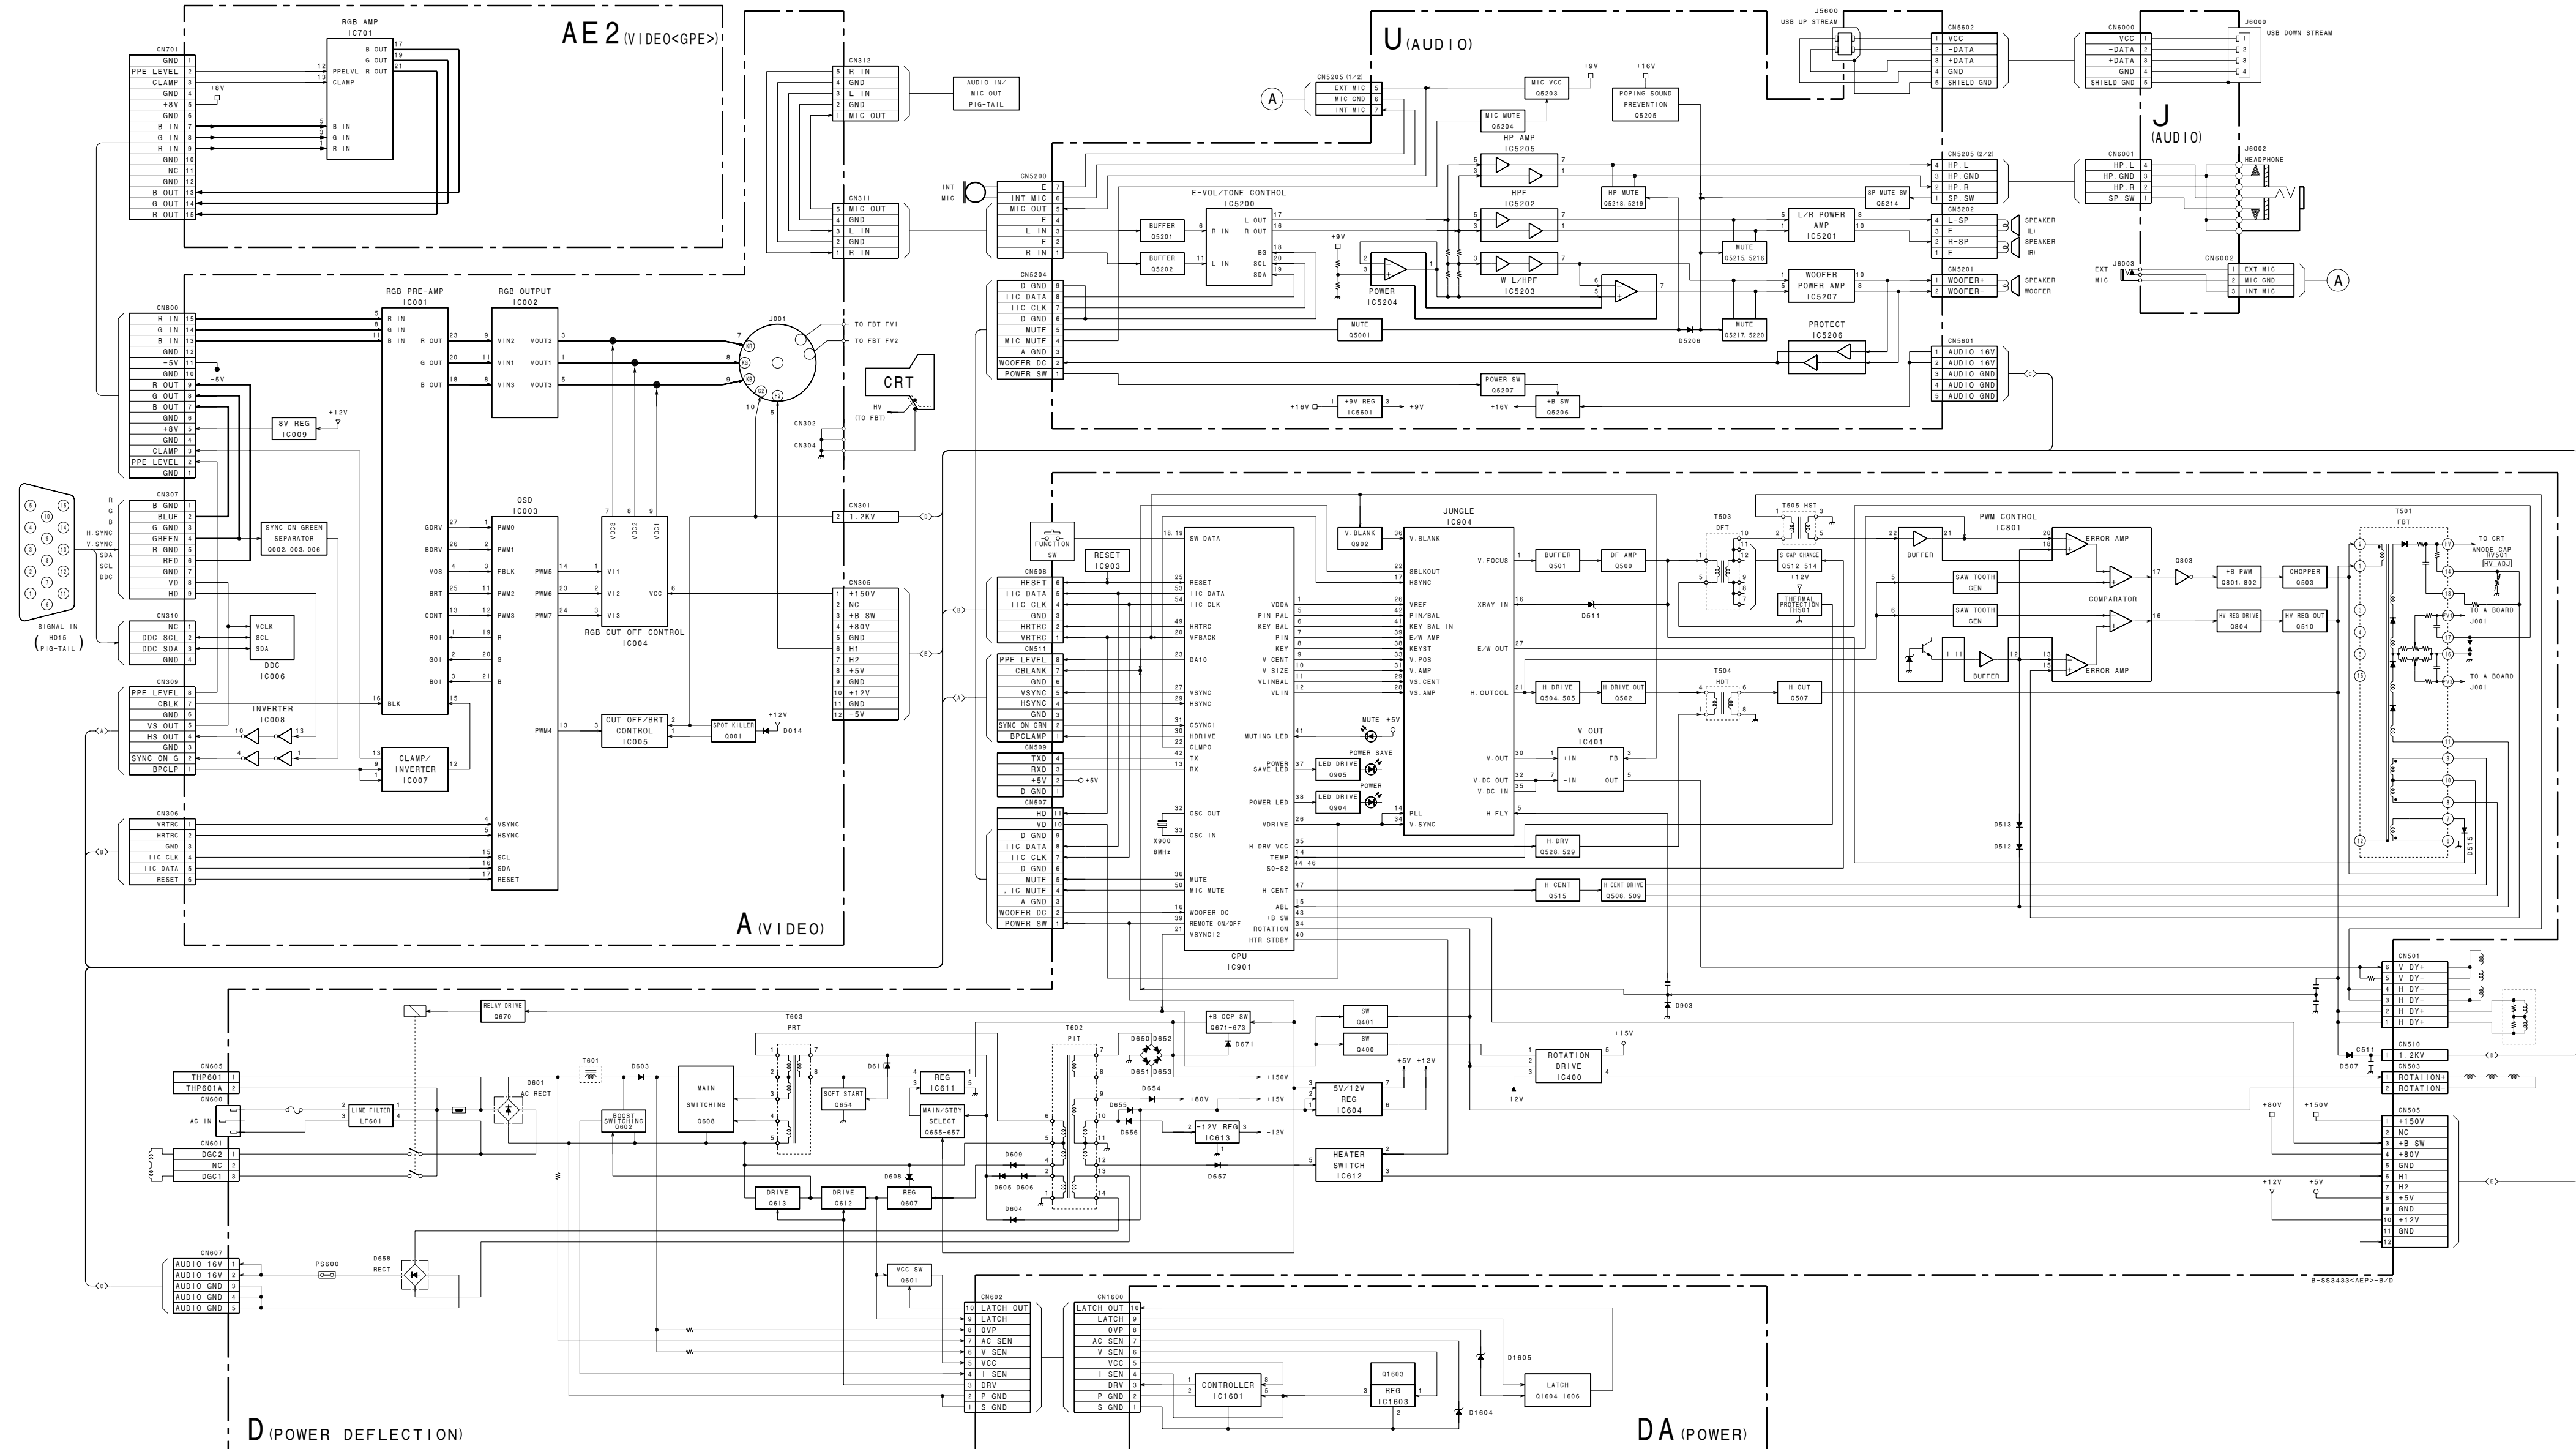

Fig. 5

SECTION 5
DIAGRAMS

5-1. BLOCK DIAGRAMS (with FRAME SCHEMATIC DIAGRAM)

5-2. CIRCUIT BOARDS LOCATION

5-3. SCHEMATIC DIAGRAMS AND
PRINTED WIRING BOARDS

- Note:**
- All capacitors are in μF unless otherwise noted. (pF: μF)
 - Capacitors without voltage indication are all 50 V.
 - Indication of resistance, which does not have one for rating electrical power, is as follows.

Pitch: 5 mm
Rating electrical power 1/4 W (CHIP : 1/10 W)

- All resistors are in ohms.
- : nonflammable resistor.
- : fusible resistor.
- : internal component.
- : panel designation, and adjustment for repair.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
- : earth-ground.
- : earth-chassis.
- The components identified by in this schematic diagram have been carefully factory-selected for each set in order to satisfy regulations regarding X-ray radiation.
- Should replacement be required, replace only with the value originally used.
- When replacing components identified by , make the necessary adjustments indicated. (See page 14)
- When replacing the part in below table, be sure to perform the related adjustment.

Note: The components identified by shading and mark are critical for safety. Replace only with part number specified.

	Part replaced (H)
HV ADJ	RV501
HV Regulator Circuit	D board Part replaced (H) IC801, C509, C542, C548, C802, C814, C815, R538, R539, R540, R541, R807, R822, R823, R824, RV501, T501 (FBT)
HV Hold-Down Circuit	D board IC801, IC904, D511, D515, C515, C516, C517, C910, R532, R533, R534, R535, R996, T501 (FBT) • Mounted D board
Beam Current Protector Circuit	D board IC901, D596, C519, C528, C549, C904, R542, R543, R544, R545, R939 • Mounted D board

- All voltages are in V.
- Readings are taken with a 10 M digital multimeter.
- Readings are taken with a color-bar signal input.
- Voltage variations may be noted due to normal production tolerances.
- * : Can not be measured.
- Circled numbers are waveform references.
- : B + bus.
- : B - bus.

SECTION 6

EXPLODED VIEWS

The components identified by shading and mark Δ are critical for safety.
Replace only with part number specified.

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- The construction parts of an assembled part are indicated with a collation number in the remark column.

- Items marked " * " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

SECTION 7

ELECTRICAL PARTS LIST

**NOTE:**

The components identified by shading and mark Δ are critical for safety. Replace only with part number specified.

When indicating parts by reference number, please include the board name.

The components identified by Δ in this manual have been carefully factory-selected for each set in order to satisfy regulations regarding X-ray radiation. Should replacement be required, replace only with the value originally used.

- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.

RESISTORS

- All resistors are in ohms
- F : nonflammable
- Items marked " * " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

The components identified by  in this manual have been carefully factory-selected for eachset in order to satisfy regulations regarding X-ray radiation. Should replacement be required, replace only with the value originally used.

The components identified by shading and mark  are critical for safety. Replace only with part number specified.
